Car speedometer application

You no longer need to buy a special device to measure speed. The phone can easily replace you! Just download one of the speedometer apps from the list below and Bob is your uncle! You can also like: 11 free radar detector apps for Android & iOS This app is known to be the best of all speedometer apps for iOS. Along with traditional features like speed measurement and classic depiction of the round speedometer in your car, this app also gets you on the journey computer, counting how many miles you drove on the current journey, how many hours you spent on the road, what your average speed is, and so on. There is a map built into the app that always tracks your GPS location and offers you the fastest and best routes. An interesting feature of this application is HUD - if you allow it you can just put your phone under the windshield, so the application will be able to measure the exact speed, using the technologies that can be found only here. You can also like: 11 Best dash cam applications for Android & iOS back in the menu ^ This application is basically an alternative to the previous one, but android. It is capable of working in offline mode as well, as well, and it connects to GPS very quickly (on average it needs 20 seconds for that). The accuracy of all measurements is approximately 98%. While driving, it shows the current speed, average speed and maximum speed. Plus, just like in the previous speedometer app on iOS, it shows you how many hours you spent on the trip and how many miles you drove. back to the menu ^ Ulysse is a speedometer app for safe driving. And it's so much more than a speedometer! For starters, the app's main screen shows time, date, battery charging, and of course, speed. Then there are two useful buttons that integrate the app with the music player (Spotify, Pandora, etc.) and the navigation app. So, as we can see, the Ulysse Speedometer is a bunch of drive gear collected in one place. More than that, if you exceed the speed limit, the app notifies you by making a special sound. After driving, you can view the history of the drives, which include the average speed, total distance, movement periods and periods for the average flight, etc. Download the app now to see all these amazing tools! back to the menu ^ DigiHUD Speedometer is a very nice minimalist application that got everything you need. You can change the colors of the surface, which is good. DigiHUD, just like the above application, can work in background mode, which means you can check your email, navigator, or any other application without stopping the work of the application. You can set the speed limit that you don't want to exceed, and the app will let you know if you exceed it. The application also allows you to learn the peculiarities of driving, such as average speed, distance and If you don't like the additional things on the screen, don't think twice, just get it and enjoy it! back to the menu ^ SpeedView is yet another one application that uses GPS to achieve the most accurate speed results. The app saves you from getting a ticket, which means it will give you a signal if you exceed the speed limit. You can set your own speed limit if you want. The app has a background mode and displays a compass. It also shows you how the drives have a history of speed and distance - everything as usual. You can even download this information to a text file and save it to your MicroSD card. So, just one more great speed app! back to the menu 1 Speedometer GPS Pro is an application that is currently free (but usually not), so we decided to share it. The app has two ways in general - for cars and bikes. The main screen shows such measurements as duration, distance, start time, maximum and average speed, height, heading. You can save them after driving/cycling and view them later. The history of the drives is displayed in a very convenient way - shown in the photo below. What you can see (directly in the process of going somewhere) are satellites and speed charts. The coolest feature, however, is a map mode when Google Maps does its job, as it usually does, but there is a small table above the screen that contains the distance, speed and drive duration. So if you like the description of this, you should definitely try it! back to the menu ^ This is probably the easiest speed app in the App Store. Black & White screen showing only speed; settings that contain only units of measurement (mph, km/h, knots), and this is literally. Not everything is as simple as it seems though. If the number on the screen becomes transparent, it means that the accuracy decreases, and vice versa. So if you need a simple app that shows you the speed, this is for you! Enjoy the retinal display with this incredible simplicity! back to the menu ^ This speedometer has all the necessary functions for safe and well driving. First, it shows you the speed. If you exceed the speed limit, the digits on the screen turn red. And if the speed limit is exceeded, the app will sound an alarm to let you know. Secondly, the application is a timer that can be useful when traveling to different places. There is also the recording of speed and some other parameters. It can be used as proof of your innocence. With the speedometer 55, speeding is inevitable! By the way, do you know why the app is called Speedometer 55? In sum, this is a very sophisticated speedometer with many classic features! You must definitely give it a try. back to the menu ^ Speedometer Free Speed Box is a fine speedometer app with the most necessary features. It measures speed and distance. The results are in one of the three most popular units - mph, km/h and knots out. More than that, the application has an embedded compass, which can also turn out to be useful. And last but not least, the app has three beautiful themes. So, so, even a good option for ya! Also read: 15 best compass apps for Android & iOS you may like: 11 Free road trip apps for Android & iOS back in the menu ^ This speedometer app for those drivers who sometimes don't realize they drive too fast. If you exceed the preset speed limit, the app changes the color of the speed tickets from green to red and makes a loud sound. Among other features that are many, such measurements average & max speed, height, distance. The app records the speed of the last 20-minute drive, which you can use as proof of innocence. What's good about this is that you have an embedded player, which means you can listen to music and change songs without leaving the application! How cool is that? Get the app now and never pay for speed! That's all the speed apps are. I hope you liked the article. Drive safe and smart in choosing apps! © 1996-2014. Amazon.com, Inc. or its affiliates Open the Mac App Store to buy and download apps. GPS speedometer and odometer app used to measure car, bike, walk, run, boat, bus, train, bike and airplane speed. GPS speedometer and odometer app is used to measure the speed of cars, bikes, walks, races, or even boats, buses, trains, bikes and airplanes. Feature:- It shows the current speed, average speed, moving speed, maximum speed, distance, odometer, stopwatch, clock, movement time, idle time, pause time, latitude, length, altitude, GPS connection and direction of movement.- Pedometer will help you count steps, see the calories burned, miles crawler and elapsed time, all the data is saved on the list and you will get an idea of all the records with just 1 click. - The speed accuracy is nearly 99%.- It also works offline.- It has 5 portrait and 5 landscape modes, including HUD (Head-up Display).- You can change the colors of the display.- This speedometer application has 4 speed units - MPH, km/h, m/s and knot.- You can set both minimum and maximum speed limits to make sure you don't get too fast. Otherwise, the application starts vibrating, sounding, and changing the display color to red.- Each trip is automatically saved and viewable at any time.- You can set 5 different speed limits at a time.- You can set the maximum speed separately.- Very useful for those who have a broken speedometer or odometer in the car, bike or other vehicle.- Tracks the route on the map and tracks every detail, including speed, accuracy, height, width and longitude.- There is a compass function that allows you to see where it points.- You can view the speed at 1/100 decimal point.- You can measure the speed of walking.- You can view all statistics on a tap. If you have any questions or doubt, contact your customer service extremely sensitive. Do not hesitate to contact us TeamCoolNiks@gmail.com.Important: The application does not work on devices that do not have GPS receivers like iPad WiFi only. It's a fantastic opportunity. It's big and easy to see and I'm Stand up between my phone and the steering wheel and the dash. I see that there are many other features in those that I haven't explored, but one I need is most simple and easy to use. And I can also ask Siri to turn on my flashlight, and if necessary, I can see the gas meter from the phone flashlight. I use this application for my ultralight aircraft and it works except for the direction it points to 0 Degrees N all the time. Other than that it is a great app for travel and I think this problem is just at later iPhone. Customer service is great. They have worked with me trying to fix this problem but do not respond yet except for the newer iPhone. Thank you so much for your kind words and support, I'm glad to hear it. We're trying to find that tiny directional error and update the app with the fix and more new features. I have been using this App for about a month. I really like that I can earn points to open the features that are good to have. My one problem is in searching those points by watching a video. In some videos, there will be a timer embedded behind the X, which usually closes the video. However, X does not work, so the only way to close the video is to close the app, you will not receive the points to view the video. We're sorry to hear that. We just load ads from Google, so the interface presented to you was brought by Google. Would you like to share a screenshot of your TeamCoolNiks@gmail.com? Thank you for your ratings and review :) The developer, Nikhil Kumar, did not provide apple with details about its privacy practices and handling of the data.
